

ACM MACHINE

The Aligning Collating Multipackaging (ACM) machine aligns your products neatly and organizes them in rows, following your desired pattern. It then gently inserts them into a pre-inflated wicketed sack. This filled sack is instantly sealed with the built-in sealer.

There are two ACM types: the standard ACM, which creates multipacks with multiple rows of products, and the ACM in Line, which produces single-row multipacks as the final output.

Left and right-handed design making it suitable for double tube bagmakers.

OEM PARTNER

Faster Turnaround

Save time and manpower efforts with automatic sack change.

Versatile System

Handles a variety of SKUs of different lengths, widths, and air-fill.

Enhanced Productivity

An infeed of up to 140 bags/minute giving you 10 - 32 multipacks/minute.

Zero Damages

Gentle product handling with side loading for zero breakage.

Your ROI < 5 years
