

AUTO-BATCHING MACHINE

A patented system that automates powder ingredient batching using stainless steel silos and screws for dosing.

The system employs an electronic scale-equipped trolley for precise ingredient weighing and a touch-screen computer for recipe selection and data storage. The silos have removable covers, and an efficient filtering system ensures machine cleanliness.

All operations are logged for traceability and can be protected with encrypted software.

Capacity of 30 kg per ingredient; an option of 8, 16 or 24 ingredients and accuracy of 1g/ingredient.

OEM PARTNER

 **Automated System**

Completely automated system saving time and labour.

 **Error-free Dosing**

100% integrity through load cell and pre-fed recipe-based control system.

 **Waste Reduction**

Dust-free environment ensures safe and hygienic working conditions.

 **100% Traceability**

Integrated barcoding system allows for traceability of all batches.
