

DUST COLLECTION SYSTEM

The Dust Collection System plays a vital role in ensuring cleanliness and safety in food manufacturing.

By integrating a tipping hopper with an external dust collection system, it collects dust at its source and uses reverse jet filter technology to discharge the dust cake deposited in the bag filters.

This system is ideal for facilities with shared setups, minimizing cross-contamination risks and upholding high hygiene standards.

Fits in diverse applications with a filtration efficiency of 5 micron @ 99%

OEM PARTNER

 **Hygienic Operations**

Dust-free environment ensures safe and hygienic working conditions.

 **Reduced Maintenance**

Reduced maintenance cost due to dust on panels and critical machines.

 **Improved Quality**

Improved product quality with no microbial settlement on corners.

 **Compact System**

Process-based, customized layout ensures it is the right fit.
